

The frequencies are required for the development of vehicles for military operations. They will be used for the integration of UAV command and control and video feeds into military ground vehicles, such as Stryker personnel carrier and Abrams main battle tank, in support of military operations.

M1, M2 and M5 military band frequencies requested are used by the AeroVironment drones manufacturer. 2.4Ghz frequencies were tried in this efforts, but interference prevented proper testing.

Adding new location to existing license.
