

**Updated Range Set-Up**

In connection with the pending modification application, the diagram on the following page is submitted to reflect the anticipated slightly new alignment of the receive building compared to the set-up that was presented in 2008 (see prior diagram presented as Exhibit 1 for File No. 0042-EX-PL-2008). Once the updated facility is complete, the receive building will be directly facing the transmit tower. This is in contrast with the prior receive building that was positioned at a slight angle from the transmit tower. The updated diagram also corrects some of the dimensions that will apply once the revised facility has been completed.
