---

Message:

General Dynamics SATCOM Technologies currently plans for testing and demonstrations at their facility in Duluth, Georgia and at the NAB in Las Vegas, Nevada. Additional demonstrations are scheduled for potential clients at Scott AFB in Illinois and in the Washington DC area. Further operations are desired by General Dynamic SATCOM Technologies to demonstrate the operational capabilities of this system at various locations and in a variety of conditions. These locations are not yet determined and will be determined by the potential clients. The locations could be anywhere in the United States and/or its territories depending on the specific desires of each client. This experimental system is based on the quick deploy capabilities and versatility of this system. Since limitation of any geographic area would restrict General Dynamics SATCOM Technologies ability to demonstrate the capabilities of this experimental system. The nationwide authority will provide General Dynamics SATCOM Technologies with the flexibility required to completely and efficiently demonstrate this experimental system.
