

## FREQUENCY SEARCH CHART

Below are the results of a frequency search using the FCC Frequency Search tools found on the Wireless Telecommunications Bureau WebPage.

The search runs from 13940 KHz to 13998 KHz.

The older FCC search tool appears to have a fault in it such that MCI Worldcom, Overseas Telecommunications, and Violet License (Div of ATT) are returned on every line. This seemingly bogus report is noted by the letters MOV on each line of the list.

We respectfully request assigned frequency 13972 KHz be deleted and replaced with 13952 KHz. 13972 KHz is 1 KHz above a frequency assigned to SailMail. When we are operating 850 Hz shift some SailMail clients experience degradation of performance due to co-channel interference. Technically optimized equipment should not be affected by the adjacency of the channels, however, many SailMail clients are yachtsmen, not radio operation experts, and as such can experience difficulty in operating their equipment.

We submit that as a courtesy to SailMail and their clientele, our selection of an alternate frequency be considered, and based upon the information we have derived, 13952 KHz appears to be a very good choice. We DO NOT have access to the Government Master File and therefore cannot be certain that our choice is acceptable, but based on available data, it appears reasonable.

| Freq. | Licensee #1 | Licensee #2  | Callsign | State | SVC | Class         |              |
|-------|-------------|--------------|----------|-------|-----|---------------|--------------|
| 13940 | MOV         | SailMail     | WHV382   | WA    | MC  | Private Coast |              |
