Request for Info - STA File # 0399-EX-ST-2005

---

Message:

All equipment being built for the current program will operate at 2.5 GHz. There are no specific plans at present for a particular follow-on to the present system; if, based on results of the current program, the government chooses to support a follow-on system, we anticipate that a trade analysis would be undertaken to select frequency and other technical characteristics.
