Request for Info - STA File # 0582-EX-ST-2005

Message:

I believe that Form 442 is designed for research and development experimentation. Our beta testing program is intended to determine the compatibility of our fully-developed radio equipment with the existing US radio environment.

Our equipment did not arrive in the US until July, over 3 months after our STA was granted, and the beta test at the Oklahoma site was cancelled a week later. We have been searching for a suitable beta test site since then.

In the interim, we must be able to demonstrate to prospective beta test companies that the system works at our office, so we need a 6-month extension for the Los Gatos, CA location to be able to accomplish that. When a satisfactory beta test site has been chosen, we intend to request another STA for the location selected.

John Stover, President
