**Re: Global Testing Laboratories, LLC
File No. 0290-EX-ST-2009**

Dear Mr. Burtle:

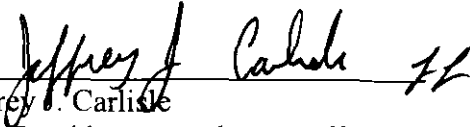

On June 15, 2009, Global Testing Laboratories, LLC ("Applicant") filed for and subsequently was granted experimental special temporary authority to test commercial machinery for compliance with European RF regulations, *inter alia*, in the 1647-1660 MHz band. These frequencies are uplink frequencies authorized for and operationally in use by SkyTerra Subsidiary LLC ("SkyTerra"). SkyTerra is the licensee of AMSC-1 and SkyTerra 1, United States satellites licensed by the Commission to provide Mobile Satellite Service ("MSS") in the L band, and provides, *inter alia*, critical communications services to public safety users.

In prior discussions with the Applicant, SkyTerra learned that the Applicant imposes restrictions on its testing, in part, to minimize the risk of interference to FCC licensees. *See* Letter to James Burtle from Jennifer Manner, File No. 0299-EX-ST-2007 (June 13, 2007). By this letter, SkyTerra requests that the Office of Engineering and Technology ("OET") formally condition the Applicant's authorization on these restrictions, which are as follows:

1. except as discussed below, all testing must be conducted in a shielded enclosure;
2. the occasional testing of large items (e.g., a road paver), which can not be done in a shielded enclosure, must be conducted from a directional antenna aimed at the item under testing and must radiate at no more than 1 Watt ERP (0 dBW); and
3. the spectrum sweep in the 1600 MHz band must be less than 1 minute in duration unless the test equipment reacts, in which case the transmission may be extended briefly.

Mr. James Burtle
