**Re: Global Testing Laboratories, LLC
File No. 0347-EX-ST-2008**

Dear Mr. Burtle:

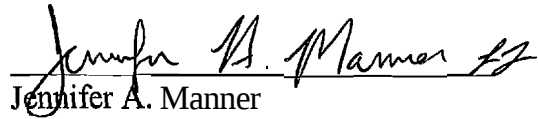

On July 2, 2008, Global Testing Laboratories, LLC ("Applicant") filed an experimental application for special temporary authority to test commercial machinery for compliance with European EMC regulations in the 1627-1645 MHz and 1647-1660 MHz bands at the Applicant's facilities in Dayton, Ohio. These frequencies are uplink frequencies authorized for and operationally in use by Mobile Satellite Ventures Subsidiary LLC ("MSV"). MSV is the licensee of AMSC-1 and MSV-1, United States satellites licensed by the Commission to provide Mobile Satellite Service ("MSS") in the L band, and provides, *inter alia*, critical communications services to public safety users. Shortly after the Applicant submitted its request, the Office of Engineering and Technology ("OET") granted the application.

In prior discussions with the Applicant, MSV learned that the Applicant imposes restrictions on its testing, in part, to minimize the risk of interference to FCC licensees. See Letter to James Burtle from Jennifer Manner, File No. 0299-EX-ST-2007 (June 13, 2007). By this letter, MSV requests that OET formally condition the Applicant's authorization on these restrictions, which are as follows:

1. except as discussed below, all testing must be conducted in a shielded enclosure;
2. the occasional testing of large items (e.g., a road paver), which can not be done in a shielded enclosure, must be conducted from a directional antenna aimed at the item under testing and must radiate at no more than 1 Watt ERP (0 dBW); and
3. the spectrum sweep in the 1600 MHz band must be less than 1 minute in duration unless the test equipment reacts, in which case the transmission may be extended briefly.

Mr. James Burtle
