

I was not able to get to where it would allow me to enter Equipment.

The equipment used for the Transmission is:

PROCEDURE-RADIATED IMMUNITY
(ref. EN 61000-4-3)

For the radiated immunity test, the EUT was configured and tested as that described in section 2. System Test Configuration of this report. The EUT was subjected to a modulated electromagnetic field equal to 10 V/m. The EUT was tested over the frequency range of 80 - 1000 MHz at both horizontal and vertical polarities. Only the bands as outlined by the FCC temporary transmitter authorization were tested.

Equipment Used During Testing:

AR FM2000	s/n: 16521	RF Field Meter
AR FP2000	s/n: 16411	RF Field Probe
EMCO 3108	s/n: 2072	Bicon Antenna
EMCO 3101	s/n: 3384	Conical Antenna
AR 100W1000	s/n: 17520	Wide Band Amp.
HP 8656A	s/n: 0378	Signal Generator
AR 888	s/n: 16860	RF Field Leveling Unit

Hopefully this will clear up the radiation questions. Single Radiation at a time and scan thru the frequencies. Total test time appx 2-4 hours maximum.

Thank you.
