RE: Status of satellite license WN9XJK (reference file number 0619-EX-ST-2018)

To whom it may concern:

Orbital Reflector Satellite was launched in the LEO on 12/3/2018 onboard the Spaceflight Industries "SSO-A" mission. The Spaceflight Industries team sent confirmation of successful Spacecraft ejection into low Earth orbit occurring less than three hours after launch. Subsequently the Global Western team has successfully activated our Earth ground station WN9XJK and successfully interrogated the Satellite and received confirmed telemetry values in response. We therefore submit this satellite status message of TRANSMISSIONS COMMENCED as required by our Special Temporary Authority (STA). Radio frequency conditions and performance are nominal.
