

The undersigned had taken up some trials and evaluation of radio testbed base station and CPE equipment earlier in 2005-06. These experimental trials used spectrum around 3.5GHz which was requested for through the STA process and granted by FCC.

The purpose is now to continue and take up similar experimental trials and evaluation around 2.5GHz, for research and development of radio testbed for export to be demonstrated by evaluation stations at Research Partners in France, Japan and India.

Trials would require that spectrum tests be carried out between 2.4GHz to 2.6GHz.
