

Purpose of research and development of radio testbed equipment for export to be demonstrated by evaluation stations at Research Partners in France, Japan and India.

The project started with a seed funding from Cisco Systems in 2003 in the area of seamless mobility and was kicked off with French Partners in 2004 and Development Partners in India in 2004. This was further appreciated by visitors from Japan from Nagoya Aichi.

Subsequently, during the visit of Director, Dr Harsh Verma to India, again in Sept/Oct 2005, it was proposed to accelerate the development of radio testbed equipment for export to be demonstrated in France, Japan and India.

One of the manufacturers, Aperto, is exporting about 65 units to India.

We propose to set up an experimental testbed equipment with 3 units in Emeryville/Berkeley, California for development and export initially to India.
