

GOODYEAR TIRE AND RUBBER COMPANY

Video Production Events

Special Temporary Authorization Application

May 1, 2013 through October 31, 2013

This STA request will facilitate the operation of the Goodyear Blimp for video production at a series of major sporting and other major televised events in the Western United States between May 1, 2013 and October 31, 2013. These events include football, basketball, automobile racing, baseball games and theater events. These require use of frequencies outside of the normal 2 GHz BAS/LTTS/CARS band which is necessary in northern and southern California and in Arizona, due to severe overcrowding of normal BAS bands.

All operation will be coordinated in advance, as are all radio frequency operations in and around these events, by the frequency coordinators of the Southern California Frequency Coordinating Committee in the Los Angeles broadcast market; the Northern California Frequency Coordinating Committee and the Society of Broadcast Engineers, and as retained by the various event organizers to insure spectrum compatibility. This application proposes the use of spectrum at 2390-2450 MHz. Operation will also be coordinated in advance with the American Radio Relay League, Inc.

Should any interference be reported, Goodyear operation will cease immediately and not resume until resolved to the satisfaction of the licensee(s) affected. **On site, the contact person will be Mr. Robert Peacock, Airship Operations Electronic Specialist, who can be reached by mobile phone at 330-283-4657. Mr. Peacock will serve as the “stop buzzer” contact.**

Any additional information can be obtained from counsel for the applicant:
