

GOODYEAR TIRE AND RUBBER COMPANY

Video Production Events

Special Temporary Authorization Application

April 29, 2016 through September 25, 2016

This STA request will facilitate the operation of the Goodyear Blimp for video production at a series of major sporting and other major televised events in various parts of the United States. These televised events, which are listed on the schedule attached to this application are horse racing, surfing, basketball, football, soccer, 4th of July fireworks automobile racing, and baseball games. These require use of frequencies outside of the normal 2 GHz BAS/LTTS/CARS band which is necessary in the listed markets, due to severe overcrowding of normal BAS bands during these newsworthy events.

All operation will be coordinated in advance, as are all radio frequency operations in and around these events, by the Society of Broadcast Engineers frequency coordinators in the broadcast markets where the events are to occur. Other events will be coordinated in advance with any event coordinators who may be retained by the event sponsors to insure spectrum compatibility. This application proposes the use of spectrum at 2390-2450 MHz. Operation will also be coordinated in advance with the American Radio Relay League, Inc. because of the use of Amateur Radio spectrum in the entire frequency range specified.

Should any interference be reported, Goodyear operation will cease immediately and not resume until resolved to the satisfaction of the licensee(s) affected. On site, the contact person and the "stop buzzer" contact will be Mr. Joshua Miller, Chief of Aerial Broadcast Operations, who can be reached by mobile phone on site at 330-354-6302.

Any additional information can be obtained from counsel for the applicant:
