Subject: Request for Info - STA File #0348-EX-ST-2014

Message:

Address the following issue posed by NTIA:

"The 406 - 420 MHz band is extremely congested and rather than list 200 frequencies that need to be notched, please find out from Gore Design as to how many frequencies are needed in this band to conduct the test."

*****We Gore Design will only be testing at 415 MHz.*****

let me know if you have any more questions.
