

Exhibit 1
GPS Networking Application 0478-EX-ST-2005

GPS Networking is submitting this request for special temporary authority to receive authority to provide re-radiation for exhibitors at the APCO convention. Like the Fire Rescue International show taking place earlier in the month, the equipment being demonstrated uses GPS in rescue and positioning applications. The participants display a range of technologies that rely on GPS, and they cannot get the GPS signal indoors on the convention floor without GPS Networking's participation.

The device will be under the control of Steven Waite of GPS Networking, who will be on site at the convention center in Denver, Colorado. Mr. Waite is reachable by cellular telephone at 719-240-7345. Mr. Waite will be able to turn the device off immediately should any shut-off be required during the period of this authorization.

This use, similar to other STAs granted to GPS Networking previously, is for demonstration purposes as contemplated by the FCC's rules, 47 C.F.R. Section 2.803(c).

The operation will be limited to indoor use at the Colorado Convention Center for the duration of the APCO 2005 conference.

Should the Commission require any further information related to this request, please contact Anne Linton at (301) 951-7062 or by e-mail to alinton@wfsllc.biz.
