

The equipment is the same as listed on my station license application for WB2XIJ. The equipment is aircraft rated Inmarsat components.

We will be at the NBAA, National Business Aircraft Association convention in Orlando. We will be demonstrating the operation of our aircraft server over the Inmarsat AERO Swift Broadband Circuit Mode channels.

These channels are equivalent to the News Media Inmarsat Mobile units used in Iraq and throughout the world. The only difference is these components are specifically made for aircraft and certified by the FAA when installed on aircraft.

I would suggest referring to my current license and that I have had this location in Savannah, GA licensed since 2000.
