Re: REQUEST FOR CONFIDENTIAL TREATMENT

Dear Ms. Dortch,

GuRu Wireless Inc. ("Applicant"), pursuant to 5 U.S.C. § 552 and 47 C.F.R. § 0.459, hereby requests that the Narrative Statement (the "Narrative") submitted as an exhibit to the attached Form 442 Experimental License application be treated as confidential and not subject to public inspection. Public disclosure of this information could result in competitive and commercial harm to the Applicant.

In accordance with 47 C.F.R. § 0.459(b), Applicant is providing the following information in support of this request for confidential treatment:

1. Identification of the specific information for which confidential treatment is sought:

Applicant seeks confidential treatment of the information contained the Narrative Statement of ELS File No. 0533-EX-CN-2026.

2. Identification of the Commission proceeding in which the information was submitted or a description of the circumstances giving rise to the submission:

Applicant is submitting this information in support of its application for experimental license, File No. 0533-EX-CN-2026.

3. Explanation of the degree to which the information is commercial or financial, or contains a trade secret that is privileged:

The Narrative has significant commercial value, and the system parameters and application specifics described therein include trade secrets.

4. Explanation of the degree to which the information concerns a service that is subject to competition:

The applications, architecture, protection measures and system parameters that are subject to this application have not yet been fully developed but are expected to lead to material developments in markets subject to competition. GuRu is aware of at least one competitor that is developing similar wireless power transfer equipment in the 24 GHz ISM band.

5. Explanation of how disclosure of the information could result in substantial competitive harm:

The information contained in the Narrative is commercially sensitive. Public disclosure of the information would provide insight into Applicant's intended system architecture, RF protection measures, sensitive parameters and future plans, which would potentially jeopardize the business plans and technical advantage of the Applicant. Public disclosure of the information contained in the Narrative would also diminish the value of the Applicant's efforts by unfairly enabling others to appropriate Applicant's efforts and develop similar systems and market plans.

6. Identification of any measures taken by the submitting party to prevent unauthorized disclosure:

Applicant has taken steps to keep confidential the information contained in the Narrative, including limiting the number of people involved in the preparation of the application and/or requiring parties to execute non-disclosure agreements.

7. Identification of whether the information is available to the public and the extent of any previous disclosures of the information to third parties:

The information contained in the Narrative is not available to the public and has only been disclosed to third parties under the premise of confidentiality agreements or under the Attorney-Client privilege.

8. Justification of the period during which the submitting party asserts that material should not be available for public disclosure:

The information contained in the Narrative should be withheld from public inspection for 3 years in order to protect the evolving business plans and strategies of the Applicant.

9. Any other information that the party seeking confidential treatment believes may be useful in assessing whether its request for confidentiality should be granted:

The public interest would not be affected by withholding the information in the Narrative. Grant of the application would not cause interruption of any services due to the protection measures taken by the applicant, as stated in the Narrative, and accordingly, public disclosure of the Narrative would not be necessary. NTIA and federal agencies operating in the adjacent band will have access to this information through normal FCC/NTIA coordination.

Sincerely,
/s/
Behrooz Abiri
Chief Technology Officer
