

**HARRIS CORPORATION
EXPERIMENTAL SPECIAL TEMPORARY
AUTHORITY APPLICATION
FILE NO. 0247-EX-ST-2016**

REVISION TO REQUEST FOR SPECIAL TEMPORARY AUTHORITY

Harris Corporation ("Harris") hereby submits this revision to its request for experimental Special Temporary Authority ("STA") under FCC File No. 0247-EX-ST-2016. The STA requested UHF and L-Band frequency usage as assigned by the US Army Spectrum Management Office for a prototype radio device demonstration to the United States Special Operations Command (SOCOM) to be held at Camp Roberts, CA for the ***SOCOM TE 16-2*** event being held from March 7-11, 2016.

Harris hereby amends its STA request to change the requested usage date from 3/07/2016 to 3/11/2016 to a shorter two day window- **from 3/09/2016 to 3/10/2016**.

Harris is also modifying the frequencies to **reduce** the previously requested ranges in both the UHF and L-Band.

Specifically:

***UHF-** Harris is replacing the previously requested frequency range of 225-450 MHz with the frequencies of **286.4 MHz and 362.25 MHz**.¹

***L-Band-** Harris is replacing the previously requested frequency range of 1250-1390 MHz with the frequencies of **1370-1390 MHz**.²

Harris is **removing the requested frequency range of 1625-1725 MHz**.

Harris is not modifying the request for the L-Band frequency range of 1755-1850 MHz.

Owing to the minimal transmit power which will be utilized, Harris believes there will be no frequency interference concerns. However, Harris acknowledges that all transmissions will be on a non-interference basis and will adhere to any conditions placed on the Special Temporary Authorization.

¹ These frequencies were previously granted to Harris under another experimental authorization (*see WF2XIB*).

² These frequencies were previously granted to Harris under another experimental authorization (*see WH2XQW*).
