Subject: Request for Info - File #0311-EX-PL-2010

---

Message:

In a letter dated July 30, 2010 the Commission sent the following inquiry in response to experimental application 0311-EX-PL-2010 - What is the reason for extended testing in a band that is primarily allocated for non-government public safety use??

Harris Corporation utilizes the frequencies requested herein for the continual development and improvement of the equipment and architecture used in the Warfighter Information Network - Tactical program WIN-T

Spectrum in the lower 4 GHz band is restricted to government usage, and the 4.94-4.99 GHz frequencies are suitable for the continual testing, analysis, and improvement of the WIN-T architecture.
