Subject: Request for Info - STA File #0354-EX-ST-2008

Message:

Dear Doug,

On September 23, 2008, in connection with File No. #0354-EX-ST-2008, FCC staff requested the following:

The Military Assignment Group (MAG) chair has voiced the following objections to your request for STA: For the range 287.5000 - 292.5000 MHz - request that the frequency be changed to a center-channel not less than 286.4000 (600 kHz above the edge of the Annex B portion) and not greater than 287.6000 MHz (600 kHz below the edge of the Annex B portion). As this is a 2.5 MHz contiguous spectrum, the STA requester should select any single center-channel within the band, add the associated 1M20XXX emission bandwidth and stay within the range noted above.

For the range 362.5000 - 367.5000 MHz - request that the frequency be changed to an exact center-channel of 362.2500 MHz. When this channel is paired with the 1M20XXX emission, this will accurately depict the requested operation and contain the emissions within the Annex B - Wideband contiguous spectrum.

Respond with corrections that will satisfy the suggested changes.

On October 21, 2008 Harris Corporation has submitted an amendment to its STA filing to comply with the request of the MAG Chair. If there are any additional questions please let us know.

Thank you,
Glenn Werner
