Re: Application of Harris Corporation, OET File No. 0887-EX-ST-2013, for Temporary Spectrum Use at the IACP Conference

Dear Ms. Dortch:

The First Responder Network Authority ("FirstNet") consents to the application of Harris Corporation ("Harris") for experimental special temporary authority ("Experimental STA") for temporary operation in FirstNet's 700 MHz band spectrum to demonstrate Long Term Evolution ("LTE") equipment in Philadelphia, Pennsylvania at the International Association of Chiefs of Police ("IACP") annual conference October 19-23, 2013. FirstNet's concurrence to Harris' request is premised on temporary operations that conform to the following parameters:

- 1) Operation will be confined to the immediate vicinity of the Harris exhibit booth at the Philadelphia Convention Center in Philadelphia, Pennsylvania. Equipment will include one temporary base station and associated antenna, and a small number of portable/mobile units.
- 2) Applicant requests authority from the Federal Communications Commission (FCC) to operate over the 758-768/788-798 MHz bands, which are currently licensed on a nationwide basis to FirstNet.
- 3) Operation will occur no longer than the period between October 19 and October 23, 2013, allowing time during that period for setup and testing, demonstrations, and teardown.
- 4) This Experimental STA is non-renewable. Any Experimental STA use of radio frequencies licensed to FirstNet beyond the period in clause (3), which this application covers, must be made by a separate request for such use.
- 5) FirstNet understands that Applicant has analyzed information from the FCC's license databases and determined that the proposed operation would not interfere or create a significant potential for interference with any public safety operations in the 700 MHz band.
- 6) Harris has stated that this temporary operation will not be used in mission-critical operations and understands that it may not be used in the delivery of live transmissions in duties to protect life, property, or safety. The equipment used will include a base station and associated antenna located at the demonstration site and a small number of portable/mobile units in demonstration scenarios only.

- 7) Harris has stated that this Experimental STA will provide IACP attendees an opportunity to test and receive an introductory knowledge of the benefits and capabilities of a Band 14 LTE public safety network.
- 8) Harris understands that the requested experimental authority only permits shared use of radio frequencies and they may have to coordinate with other conference attendees using radio frequencies. FirstNet has issued a similar concurrence to another applicant attending the conference and may issue more.

FirstNet concurs with the proposed operation by Harris on certain frequencies currently licensed to FirstNet for purposes of demonstrating LTE equipment in Philadelphia, Pennsylvania. This consent is subject to the FirstNet's ongoing ability to monitor any operations and use of FirstNet's licensed spectrum.

Respectfully submitted,

T.J. Kennedy
