Dear Sir,

I understand that our application is dismissed due to lack of indication that the experimentation is for equipment to be used for export purposes only in response to an appropriate Question in the application form. I used Form 442 which does not appear to explicitly ask about exportation, other than the question whether foreign governments would be participating. I did include an exhibit outlining the proposed tests indicating clearly that the purpose was not for use in the US but for exportation to other companies once the experimentation was completed.

I do find, on further investigation, that the submission was in .docm format and not .doc format. I have since uploaded the exhibit in .doc format.

Would appreciate your reconsideration in light of this information.

Your Sincerely,

Vishnu Sahay
