

EXHIBIT: *REVISED* Statement of Government Agency Contract
Information and Explanation of Technical Characteristics of
Proposed Tests - Revision 1/25/06

The Special Temporary Authority Experimental Authorization WD2XDM, file no. 0248-EX-PL-2005 was issued pursuant to a contract issued by SPAWARSCEN SD 28502, contract no. N66001-00-D-5065, Task Order 0025: "Space and Naval Warfare (SPAWAR) Systems Center, San Diego (SSC-SD), Code 2736, has been tasked by the United States Special Operations Command (USSOCOM) to support their requirements to modernize and transform psychological operation (PSYOP) equipment through research, development, test and evaluation efforts. This task is specifically directed toward the RDT&E of new alternatives for Amplitude Modulation (AM) broadcast antennas and antenna tuning units (ATUs)."

Contract N66001-00-D-5065 as extended expires on 1/27/06. The initial tasks described in the application for Special Temporary Experimental Authority have been successfully performed. SpaWar now proposes to conduct additional tasks under contract no. N66001-05-D-5040. Since the original authorization was conditioned to expire with the original contract (license condition #6), this application requests modification of the license and extension to the expiration data of the current contract or October 18, 2006, whichever is earlier.

Contract Officer: Jack Harden; 619-553-1735; jack.harden@avy.mil

Technical Contact: Joe Mantione; 619-553-1178; joe.mantione@navy.mil

The tests and test procedure are unchanged from the description in the original application. Extension of the authorization will allow tests of additional U.S. military equipment configurations, as well as tests of equipment under development by SpaWar and the licensee pursuant to the contract and task order descriptions.
