

EXHIBIT B

Statement of Eligibility for STA

1. Purpose of this Submittal

This submittal is for an STA to cover operation of a temporary low power FM transmitter in the Highway Information Systems Inc. (HIS) parking lot in Durham, NC. This unit will be used for demonstration and training purposes for HIS's customers for 1-2 hours a day during the week of 3/21/05-3/25/05.

2. Potential Interference Issues

In terms of theoretical field strength, the nearest co-channel broadcast stations are WRFX-FM (84 kW at 99.7 MHz in Kannapolis, NC at a distance of 105 miles) and WZAX (6 kW at 99.7 MHz in Nashville, NC at a distance of 50 miles). The nearest adjacent-channel stations are WMAG (100 kW at 99.5 in High Point, NC at a distance of 65 miles), WFXQ (22 kW at 99.9 MHz in Creedmoor, NC at a distance of ____), and WKXB (100 kW at 99.9 MHz in Burgaw, NC at a distance of 107 miles). Listening tests on the adjacent channels detected moderate strength signals. Listening test at the co-channel detected adjacent channel interference from WMAG (99.5). This suggests there will be minimal interference with any co-channel stations in the area but that there may be slight interference with the adjacent channel stations within the immediate vicinity of the station for the few hours when the tests are being conducted.
