

FCC Experimental License Application

Exhibit A.

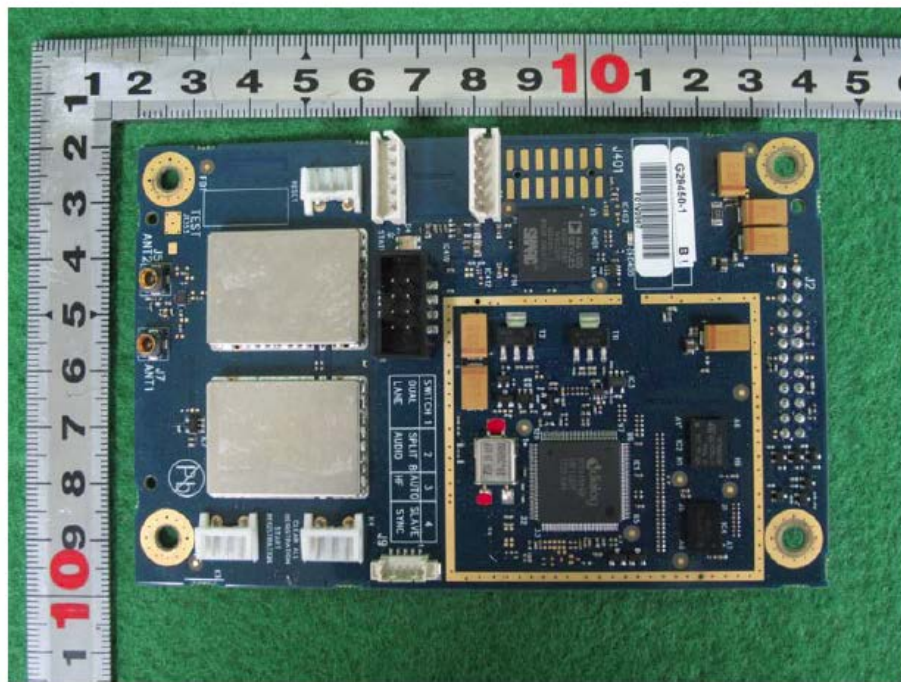

02/08/2017

Example below is a 2.4GHz radio module with integrated PCB antenna. We obtained modular certification for the radio. We want to look at a dual band radio module and look into the 25GHz band.

Thus, our request for experimental license to prototype and test 5.8GHz and 25Ghz radio modules at our Poway Ca. engineering and manufacturing facility.
