

This Exhibit is to explain how the transmitters used in the product development testing will be tracked and reclaimed when testing is complete. This exhibit is for STA file number 0161-EX-ST-2003, confirmation number EL13222, dated 4/28/2003.

Each transmitter will be serialized and permanently marked with the serial number. A spreadsheet will be maintained that lists the location of each transmitter. When a transmitter is reclaimed at the end of testing, an appropriate column in the spreadsheet will be marked. This will allow any transmitter to be accounted for at any time.

When testing is complete the same team that performs the installations will reclaim the transmitters.

The nature of the device is such that there are no controls or adjustments, so there will not be any issues with people trying to use the device for anything other than its intended purpose. Additionally, the sites will be supervised by the personnel performing the tests who will make sure that a transmitter never leaves the site.
