

Description of Modification of Experimental License WG2XLP

1. Adding frequency spectrum from 68.00 KHz to 76.00 KHz KHz to be able to collaborate with other experimental stations operating in that frequency range
2. Increasing EIRP and transmitter power to be able to collaborate with other experimental stations.
3. Adding SSB suppressed carrier mode for testing reduced bandwidth communications at the frequency range of 68.00 KHz to 76.00 KHz
