

**EXHIBIT B**

The proposed experiment by HySky Communications, LLC (“HySky”) will conform to the technical specifications and conditions that are set forth in the authorization for WPKU683, except, as set forth in Exhibit A, with respect to the length of time that channel occupancy assessments will be valid and to the accumulated transmissions per hour by the system when operating pursuant to the Experimental Authorization. In order to conform to the OET electronic filing requirements, and pursuant to the guidance of the Experimental Licensing Branch staff given in connection with HySky’s previous application for special temporary authority, HySky’s electronic Experimental Authorization application sets forth the lowest and highest frequencies that are authorized for WPKU683. However, HySky’s experiment will only use the 954 channels authorized for WPKU683, not all frequencies between 3171 kHz and 23508 kHz.
