FCC Form 442

QUESTION 14: STATEMENT OF PREVIOUS LICENSE DENIAL

iRobot previously held an Experimental License (call sign WE2XUH) first granted on October 3, 2008 (File Number 0328-EX-PL-2008) and was renewed effective October 1, 2010 (0271-EX-RR-2010). Although WE2XUH expired on October 1, 2012, iRobot applied for a new license for the same frequency band (4.9 GHz) in the same locations on June 17, 2013. This application was dismissed without prejudice on June 25, 2013 because iRobot is not a public safety entity in accordance with 47 CFR § 90.1203.

iRobot is resubmitting an application is to obtain a license to allow iRobot to design, develop, manufacture, and test unmanned robots operating in the 4.9 GHz frequency band for local public safety entities and United States government agencies (contracts with the public safety and United States government agencies are listed and explained in greater detail in separate exhibits). In that the 4.9 GHz frequency band is allocated to public safety, these entities require the iRobot robots to operate in this band. Consequently, iRobot is required to use the 4.9 GHz frequency band to design, develop, manufacture, and test robots for these customers.

In response to the concerns of the Public Safety Bureau, iRobot reduced the radius of operation for each site from 40.20 km to 1.2 km.
