---

Message:

The FAA previously objected to our request to operate in Anchorage AK due to FAA ASDE-3 operations. It is our understanding that operation of the ASDE-3 equipment is localized to the airport in Anchorage. With that in mind, our main interest is in using our synthetic aperture radar in the area surrounding Anchorage. We do not have a firm, fixed location where we need to operate, so we can be flexible in that regard. Basically, we would like authorization to operate wherever we can within a 160 km radius of Anchorage. We will gladly abide by any geographic restrictions desired by the FAA to avoid potential conflict with the ASDE-3 system.
