Subject: File Num#1467-EX-ST-2026 reminder on FAA pre-coordination data request

---

Message:

Dear Experimental Licensing Branch, Intel would like to provide an update regarding FCC File No. 1467-EX-ST-2026. To avoid the FAA coordination issue associated with the 5151-5249 MHz (U-NII-1) band, Intel has revised its proposed operation and has disabled Bluetooth High Band operation within the 5151-5249 MHz frequency range. The STA request now covers operation only within the 5.725-5.850 GHz (U-NII-3) band. The equipment remains limited to Bluetooth High Band interoperability testing, and Wi-Fi transmit functionality continues to remain disabled. The technical documentation supporting the application has been updated accordingly, including the RF characteristics exhibit, which now identifies the requested operating frequency range as 5.725-5.850 GHz only. Given that the U-NII-1 frequencies have been removed from the request, Intel respectfully requests confirmation that no FAA coordination is required for the revised application and asks whether any additional documentation or application amendments are needed to facilitate continued processing. Thank you for your assistance. We remain available to provide any further information that may be required. Respectfully, Benjamin Lavenant
