Message:

Is the Andover, MA location part of your application?

Andover, MA is our corporate office and test facility. It has a valid license that remains in use. Lincoln, RI is an operating test site with National Grid. It also has a valid license that remains in use. Burrillville, RI is a back up site for 15.31(d) field testing; however it is not yet active pending discussion on the suitability of Lincoln as the sole location for field testing of EMC. The present application is in addition to these and is for another utility to evaluate the technology.

Please confirm the correct emission designator.

Details are attached; however on the previous license 300KP1A was determined.
