Special Conditions:

- (1) In lieu of frequency tolerance, the occupied bandwidth of the emission shall not extend beyond the band limits set forth above.
- (2) Licensee should be aware that other stations may be licensed on these frequencies and if any interference occurs, the licensee of this authorization will be subject to immediate shut down.
- (3) The National Science Foundation notes footnote US 342, urging all practicable steps be taken to protect Radio Astronomy observations in the frequency range 1330 to 1400 MHz. This is a very important frequency range and is actively used by radio astronomers in the US. The NSF does not object to these tests, since these devices are said to be operated on the ground and at low power. The NSF requests that "all practicable steps shall be taken to protect the radio astronomy service from harmful interference."
- (4) Stop buzzer point of contact is Tung Ng at (781) 430-3150.
- (5) Prior to the start of operations, iRobot must identify a STOP BUZZER point of contact to :

Mr. Danforth Moon
Phone: 781-225-6020
Email: danforth.moon@us.af.mil

- (6) Further requests for extension of the authority granted herein must be filed on Form 442, "Application for New or Modified Radio Station Authorization under Part 5 of FCC Rules - Experimental Radio Service." Future STA requests to extend this authorization will not be considered.
