

Statement of Use

International AMR is one of Itron's core businesses and we will be developing products and systems for export on an ongoing basis.

The modification of this license was for the purpose of adding one location. Oconee, SC has recently become one of Itron's design facilities. They will be doing the design, development and test of some of our 433MHz endpoints that go into electricity meters that are sold worldwide. 433MHz is a common un-licensed band used outside the US. During the development process we will be testing the units using the 433MHz band, specifically. However, we will also be doing some testing in the other requested frequencies.
