Mr. Ghaffari,

Here is the supplement to our application per your request. Please let me know if you have any other questions.

Sincerely, Joern Fuchs

supplementing application No. 0427-EX-PL-2008:

The transmitter is part of the system configuration of a Swedish Coastal Surveillance radar that we are currently modernizing. It transmits a low power signal (~20 mW) that is detected by the Surveillance radar and used to continuously monitor north alignment. The signal is barely above the noise level of the Surveillance radar, just enough to be detected, but not high enough to interfere with the surveillance mission.

The test transmitter is located at our Loop Canyon test facility, on top of a mountain ridge about 10 km north of our Van Nuys factory. It is equipped with a horn antenna pointing towards Van Nuys.

We would like to apply for a 24 month permit.
