Subject: FCC File No. 0697-EX-ST-2014

Message:

The purpose of this correspondence is provide clarification on the frequency range requested. The entire frequency range from 50-3000 MHz is not necessary. The test will only require 209 frequencies. The frequency range was initially requested for two reasons. First, it would be cumbersome to input 209 frequencies as separate entries on the FCC website. Second, and primarily, there may be some issues of frequency drift.

It has come to my attention that some of the frequency bands requested are owned by the FAA and we may not be able to FAA frequency coordination in time for our anticipated test date. Is there a POC I can reach by phone? It will probably be easier to coordinate and grant licenses after I provide some clarification.

Regards,
Jeanette Stecker
