Kevin Brown

7 May 2013

Gentlemen,

Thank you for the revised coordination request. You have opted to licence your project as an experimental satellite. The coordinated frequency is:

Up and downlink 437.405 MHz

The above frequencies have been coordinated with the understanding that you have agreed to the IARU terms of reference for the use of amateur service spectrum for experimental purpose. Trailblazer is manifested on the ElaNa 4 launch. Should this change, please communicate with me as it may then be necessary to relook at the frequencies.

As the launch date keeps shifting please let us have the final launch date. After launch please keep us informed of the progress and the operation of the satellite and its exact frequencies should the frequency have shifted. **Please also confirm the name and full contact details of the person who will control the operation of KYSAT -2 after launch.**

Please note that all frequencies in the amateur satellite service are shared frequencies. We have attempted to make the best possible selection for your project.

We have noted the measures taken in controlling the satellite. We however draw your attention to the attached paper "controlling satellites" which sets out the requirements as per ITU regulations.

Best wishes for a successful project. Please keep us informed of progress

Hans ZS6AKV  
Hans van de Groenendaal  
IARU Satellite Adviser
