

FCC form 442

Question 6

Kentucky Utilities Company is working with the FAA and OCAS AS of Norway in the testing and development of a radar based obstacle collision avoidance system (OCAS). This is intended to help protect the flying public. This requested permit is for a testing period only. The tests are intended to take place in October 2004. Once the testing is completed, the unit will be dismantled. Assuming the tests prove successful, we will submit appropriate FCC permit forms requesting permission for a permanent OCAS radar unit nearby.
