Date of Submission: November 20, 2005

a. Description of Experiment (narrative)

- 1) Testing AirSpan WiMax equipment and propagation within one of our current service areas.
- 2) Testing the ability to serve enterprise level services such as Data, VoIP etc.
- 3) Testing the ability to provide Public Safety services for the Cherry Creek Business Improvement District.

The overall goals of the experiment are to prove the efficacy of the Airspan equipment in a variety of networks with known performance parameters. Comparison of the Airspan network performance parameters operating at 3.5 GHz with the metrics from the legacy Kiva operational performance for networks operating at US authorized frequencies will be used to predict the performance that can be expected for the Airspan equipment when delivered to the overseas markets for which the equipment is being exclusively sold.
