

DESCRIPTION OF *PRO FORMA* LICENSE ASSIGNMENT

L-3 Communications Cyterra Corporation (“Cyterra”), the licensee of the Experimental License WE2XLN (FCC File No. 0614-EX-CR-2019) (“License”), is hereby proposing, through this application and subject to Commission approval, to assign the License to L3 Fuzing and Ordnance Systems, Inc. (“L3 FOS”) as part of an internal corporate restructuring. Both L3 FOS and Cyterra are controlled by L3 Technologies, Inc. (“L3T”), which is further controlled by L3Harris Technologies, Inc.

This proposed assignment replaces and supersedes the previously approved assignment from Licensee to L3T. See FCC File No. 0004-EX-AU-2020. In that prior assignment proposal, the License was to be assigned to L3T. Upon further consideration, however, L3T, upon receipt of the License, now intends to contemporaneously assign the License to another of its subsidiaries, L3 FOS. Accordingly, in order to obtain FCC approval as to the ultimate assignee of this proposed restructuring, the parties have submitted this updated *pro forma* assignment application. Nonetheless, as L3T ultimately controls both Cyterra and L3 FOS, the proposed assignment remains entirely *pro forma*.

The proposed *pro forma* assignment does not involve any other FCC authorizations that require FCC approval prior to consummation. Accordingly, prompt FCC grant of this application is respectfully requested.
