

Statement for 60 month license vice 24 month

As stated in the previous statement, the purpose of this license is to have command and control of an Unmanned Air Vehicle (UAV) system we use for services, research and development of new UAV technologies. One of the frequencies used will be for video or data downlink. L-3 services intends to use this station and equipment for at least the maximum period allowed of 5 Years. The frequencies used will not change for this system unless the command and control suite is changed. That of course will then require us to modify the current license or apply for a new one.
