Re: Request for Expedited Processing of Experimental STA 0494-EX-ST-2010

LGS Innovations is requesting expedited processing of Experimental STA 0494-EX-ST-2010 for the reasons below.

This proposed test will evaluate wireless capabilities considered critical to mission success for a US Government, Department of Defense Crisis Response System known as PEAK (Pre-Positioned Expeditionary Assistance Kits). The time critical nature of this specific test is driven by Hurricane Season and other DOD mission requirements impacting safety of life and property. Normal DOD spectrum management procedures were not capable of supporting this test as originally expected. Thus, we are requesting this Experimental License to support DOD critical mission requirements.
