

Exhibit A

The EADS IFF Model 200I is Commercial-Of-The-Shelf (COTS) secondary surveillance radar interrogator which is on loan to Lockheed Martin. Testing trials will commence as integration of this interrogator will be applied to a TPS-77 mobile ground based radar.

Once integrated, the IFF radar communication data and display information will be analyzed on the TPS-77.

This IFF interrogator if operated with success will show the promise of delivering and replacement of IFF systems previously supplied by Lockheed Martin. Consideration of proposed replacement for TPS77 and FPS117 IFF product line standard will be based on the results of such trial operations.
