

Exhibit 1

The experimental radar operated under the WE2XFR license was originally a legacy model #ST-101 by Sensor Technology Systems (STS).

Sensor Technology Systems (STS) of Arizona was acquired by ICx Technology of Arlington, VA, and the radar model was changed to Model #STS-12000.

Model #STS-12000 is a Commercial Off The Shelf (COTS) ground based radar. The modifications to the technical parameters in the application reflect this Model COTS radar.

Lockheed Martin plans to integrate this radar into systems for use in homeland boarder protection and security. One fixed unit for demonstration, proposals, and software integration testing, will be used.
