Attn: Experimental License Branch
Re: Modification of Experimental Authorization
Call Sign: KK2XCJ

You will find attached one completed copy of the FCC Form 442, Application for Modification of Experimental Authorization other than Broadcast, and the required FCC application fees. This request is to modify the existing station authorization, KK2XCJ, assigned to our operations located near Moorestown, Burlington County, NJ.

The modification being requested is to change the operation location from a single fixed location at 39°59'16" N. and 074°54'32" W. We are requesting the new area to be a one nautical mile radius of the center point coordinates of our facility, 39°58'48" N and 74°54'33" W, to permit multiple testing at our facility at different locations on the same programs under the designated contracts. This area of operations will keep the transmitting equipment within the bounds of our property. We also wish to use the same frequencies to conduct IR&D programs to develop improved systems to meet any possible future requirements. All associated units will continue to be fixed operations, but the tests need to be conducted at various on site locations. All other technical aspects of the equipment authorized will remain unchanged.

If you have any questions or problems relating to the technical aspects of this application request, please feel free to contact William M. Mulqueen at (856) 722-2991 or william.m.mulqueen@lmco.com.

Very Truly Yours,

Claude E. Wells
