

Attachment to File No. 0222-EX-PL-2016

Contract # W31P4Q-16-C-0036 is for UAE HIMARS Software Modernization and issued through the Foreign Military Sales (FMS) office of the Precision Fires Rocket & Missile Systems (PFRMS) office of the U.S. Army Aviation and Missile Command (AMCOM). The effort involves the utilization of Thales PR4G-V3 radios at the contractor's facility in Grand Prairie, Texas. The use of the frequency bands will be to broadcast and receive messages during integration testing. The primary band used will be the 32.10 MHz band, with the remaining bands held for alternate usage if the primary is occupied or corrupted in some manner. The power requirements for broadcasting are very low; with just enough power to reliably get messages to and/or from the transmitter/receiver, with a separation distance of less than a quarter mile.

The applicant is not the owner of the equipment. The equipment will be owned and furnished by the USG; however, the applicant will operate the equipment.
