

FAA Coordination

The EADS Secondary Surveillance Radar (SSR) and Beel Tech Inc IFF transponder pre-coordination is given by the FAA Eastern Regional Office by the following:

FREQ M1030, SER#NG T100140

FREQ M1090, SER# NG T100141

This FAA coordination was obtained for a renewal period of 24 months.

Lockheed Martin proposed operation for research and development of a “on loan” EADS Model 2000I 2000W IFF transmitter, integrated into a TPS79 antenna. The outcome of proposed research is to verify full system performance, and demonstrate capability for domestic and foreign military markets. Proposed research includes removing the EADS 2000I 2000W loaner and replacing it with a Lockheed Martin owned EADS Model 2000I 1500W version 5/S for radar systems development and demonstrations.
