

Project Description

The 24 month application incorporates use of IFF into the MEADS Multifunction Fire Control Radar. Lockheed Martin is continuing contractual work under MiDD141003 with MEADS International, who is conducting work under contract with the NATO MEADS Management Agency (NAMEADSMA), whose funding comes jointly from the US Army, German Air Force, and Italian Air Force. This work provides updates and improvements to the MEADS Multifunction Fire Control Radar basic functionality and performance, including incorporation of IFF. The primary MFCR testing is being done under license WG2XGK.
