

EXHIBIT NO. 1 TO FCC FORM 442

Lockheed Martin
7 Barnabas Road
Marion, MA 02738

Lockheed Martin has developed an advance multifunction mast antenna for submarine use. This work is being performed for the U.S. Navy under contract N66604-01-C-0001. As part of factory acceptance testing, Lockheed Martin performs high-power validation measurements. In order to perform these measurements, it is necessary to apply CW signals to the antenna system. The CW signals are up to 1000 Watts in the MF/HF band (effective radiated power from 20W to 850W).
